

# Evacuslider Premium Plus

With an increased working load of 182kg (28.6 st), the **Premium Plus Evacuslider** has been designed to assist with the horizontal evacuation of larger persons from care homes, hospitals or other public buildings.

Made from a tough, wipe clean material, patient comfort and support comes from the thick foam mattress, while the integrated foot pocket and 3 safety harnesses help to secure and cocoon the client. In addition, the moulded head cushion offers further protection.

**Evacusliders** are quick and easy to deploy and offer a cost effective solution for emergency evacuations where narrow corridors, staircases or external fire escapes can present difficulties for other types of equipment.

## Features
